The field of cosmology may be on the verge of a significant paradigm shift, as there is an increasing awareness that scientists have missed something fundamental as they carry on in their quest for a theory of everything and a theory that unites general relativity with quantum mechanics. Knight proposes a new theory suggesting that the space-time geometry possesses a complex hierarchical structure that comprises twelve dimensions—nine space dimensions and three time. Furthermore, this structure is divided into three strata, each of which has its own four-dimensional structure and stratum-specific fundamental forces and parameters—with variations in the gravitational constant  $G$ , the speed of light  $c$ , and the Planck constant. Through the pages of this work, this theory is further explained.
