Reality, Universal Ontology and Knowledge Systems: Toward the Intelligent World Azamat Abdoullaev
The most thrilling and challenging intellectual issues of humanity are whether and how a consistent formal representation of reality as a comprehensive theory of everything and anything can be obtained and how powerful (superhuman) intelligent machines can be brought into existence.

Reality, Universal Ontology and Knowledge Systems: Toward the Intelligent World provides cutting-edge research on reality, its nature and fundamental structure, and how it may be effectively represented both by human minds and intelligent machines. Striving to create a standard world model as a universal formal ontology, it offers a uniformly organized human knowledge of the world. The book instructs how to develop real world intelligent technology with ontological reasoning mechanisms (meta-physical semantic machines) and secure communication interoperability between two species of intelligences, existing human beings and nascent encyclopedic intellectual systems promising the profound revolution in human values and ways of life.
